+ PROFILE

Andrew is an experienced Project and Program Manager with strong additional capabilities in Business Analysis, Software Test and Operations Management. He has an excellent, proven blend of technical, managerial and leadership skills and experience in leading international development teams.

An excellent communicator, Andrew is a 'hands on' manager, comfortable in working at all levels in an organisation. He has worked across the entire software development life-cycle on a broad range of enterprise projects, spanning industries including Government, Higher Education, Emergency Services, and Utilities (telecommunications, power and rail).

+ KEY ENGAGEMENTS (ADEPT)

Mellor Olsson Lawyers

The legal firm of Mellor Olsson required independent advice for its future Information Technology directions and purchases. Andrew spent time with the firm, understanding their technical environment and business drivers, reviewed their current service provision and provided Mellor Olsson with a series of recommendations for their strategic direction.

Nobles

Established Adelaide lifting and rigging firm Nobles required assistance in replacing their Mobile inspection system which no longer met its business needs. Andrew analysed the issues with the present system, interviewed staff across the organisation, and created a new set of business requirements and a Request for Proposal which was subsequently issued to prospective vendors.

+ TECHNICAL SKILLS/EXPERTISE

- Project and Program Management
- Test Management
- Performance Testing
- Business Analysis
- Vendor Management

+ INDUSTRY EXPERIENCE

- Telecommunications
- Emergency Services
- Utilities
- Higher Education
- Government

+ SIGNIFICANT ACHIEVEMENTS

- Successful delivery of the Mobile Message Switching Solution for Motorola's Hong Kong Police project. Inheriting a troubled project, and a team of 50 software developers spread across three countries, Andrew was able to turn the project around, through a strong focus on improved testing and defect management and open and transparent communication with all stakeholders.
- Delivered a complete refresh of the University of Adelaide's Oracle database infrastructure. Commencing with the development of the business case, Andrew negotiated with the prospective hardware and software vendors, and oversaw the implementation of the technical solution and the staged migration of over 70 individual databases and the applications that they supported. The project delivered massive improvements in database stability and performance and added an additional layer of resilience and disaster recovery.
- Creation of a Performance Testing solution for the NCVER organisation's AVETMISS data collection system. Andrew analysed the needs of the organisation, modeled their data and transaction traffic, creating a test infrastructure able to simulate several thousand providers submitting their annual returns over a period of several days.
- Led the development and deployment of the NodePhone 2 VOIP telephony product for ISP Internode.
